DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-15, 21-33, 38-51, and 56-58 rejected under 35 U.S.C. 103(a) as being unpatentable over Winn et al in combination with Sarraj et al. Winn et al discloses the instant compounds to be known endothelin antagonist. Sarraj et al evaluated the effect of BQ 123, an endothelin antagonist (ET-A), on bone growth. The study found a positive correlation between bone resorption and BQ 123. It would be obvious from this study that the use of other types of ET-A compounds would also have a positive effect on bone resorption. The combination renders the instant methods prima facie obvious absent evidence of unexpected results.

cancel
Claims 16-20 and 52-55 are rejected under 35 U.S.C. 103(a) as being unpatentable over Winn et al in combination with Tasker et al (WO 97/30046). See above for the disclosure of Winn et al. Tasker et al discloses that endothelin antagonist are known to be useful for the treatment of bone pain associated with bone cancer. It would be obvious to one skilled in the art to use the endothelin antagonist of Winn et al for the use of Tasker et al since the compounds are both endothelin antagonist. The combination renders the instant method prima facie obvious absent evidence of unexpected results.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references are cited to show the state of the art
